

The Container Store jumps out of the box for LED

Villa Lighting Inc. brings LED lighting solutions to The Container Store to improve operational costs and lighting levels.

THE SITUATION

The Container Store wanted to improve on their store's lighting design to capture savings that they were not getting from their traditional lighting.

THE SOLUTION

- 1) Villa Lighting introduced them to LED lighting products.
- 2) Replaced 32W compact fluorescent downlights with a Juno Lighting 15W LED downlight.
- 3) Replaced 39W metal halide track head with a Juno Lighting 22W LED trackhead.
- 4) Replaced 8' T8 fluorescent 128W aisle fixture with 6' 104W LED GE Lighting Blade fixture.

By incorporating LED downlights, track heads, and aisle lighter fixtures for all new stores and remodels, The Cotainer Store was able to capture those savings in energy consumption and maintenance free operations.

OPERATING IMPACT

- Reduced energy consumption
- Improved maintenance operations

ENVIRONMENTAL IMPACT

- Enhanced lighting visibility throughout store.
- Improved facility aesthetics
